

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings of claims in the application:

Listing of Claims:

Please amend claims 1, 3, 5, 8-9, 15, 19-20, 25, 28-29, 35, 41-42, and 45 and cancel claims 12, 22, and 34, without prejudice, so that the pending claims read as follows:

1. (currently amended) A system for handling a plurality of accounts, comprising:
a wireless device having software which ~~an account management application and~~
~~an accounting application,~~

~~wherein said account management application~~ internally stores and manages a
plurality of accounts each having an internal account balance,

~~wherein said accounting application~~ calculates charges for a communication
involving said wireless device and allows transfer of amounts amongst said internal accounts;

wherein said software ~~account management application and said accounting~~
~~application cooperate to selectively~~ uses said calculated charge to charges one of said the
plurality of internally stored accounts for said communication.

2. (previously presented) The system according to claim 1 further comprising:
a user interface to allow a user to determine which of said internally stored
accounts should be charged for the communication.

3. (currently amended) The system according to claim 1 wherein the software
~~account management application~~ uses an algorithm to automatically select one of the plurality of
internally stored accounts to be charged for said communication.

4. (previously presented) The system according to claim 3 wherein the algorithm
selects the internally stored account based on the origin or destination of the communication.

5. (currently amended) The system according to claim 1 wherein said communication is ~~wireless device is capable of making or receiving~~ a data communication.

6. (canceled)

7. (original) The system according to claim 1 wherein the wireless device is a mobile phone.

8. (currently amended) The system according to claim 1 wherein said software ~~the account management application and accounting application~~ resides on a smart card attachable to the wireless device.

9. (currently amended) The system according to claim 1 wherein said software ~~the account management application and accounting application~~ resides on an internal memory in the wireless device.

10 -12. (canceled)

13. (original) The system according to claim 1 wherein the plurality of accounts includes a postpaid account and a prepaid account.

14. (previously presented) The system according to claim 1 wherein at least one of the plurality of accounts has a usage limit; and
wherein the ability of the user to use the wireless device is restricted when the usage limit is exceeded.

15. (currently amended) A wireless device capable of communicating within a network comprising:

software ~~an account management application residing within~~ the wireless device to store a plurality of accounts each having an internal account balance;

~~an accounting application residing in the wireless device to calculate charges for a communication and allow transfer of amounts amongst said internal accounts ; and~~

a user interface to allow a user to selectively determine which one of the plurality of internally stored accounts will be charged for said communication using said calculated charge;

~~wherein the account management application and the accounting application function in cooperation with each other to charge the selected internally stored accounts for said communication.~~

16. (previously presented) The wireless device of claim 15 wherein said wireless device is capable of making or receiving a data communication.

17. (canceled)

18. (original) The wireless device of claim 15 wherein the wireless device is a mobile phone.

19. (currently amended) The wireless device of claim 15 wherein said software ~~the account management application and accounting application~~ resides on a smart card attached to the wireless device.

20. (currently amended) The wireless device of claim 15 wherein said software ~~the account management application and accounting application~~ resides on an internal memory in the wireless device.

21-22. (canceled)

23. (previously presented) The wireless device of claim 15 wherein the plurality of accounts includes a postpaid account and a prepaid account.

24. (previously presented) The wireless device of claim 15 wherein at least one of the plurality of accounts has a usage limit; and

wherein the ability of the user to use the wireless device is restricted when the usage limit is exceeded.

25. (currently amended) A mobile phone comprising:

a first line and a second line to both make and receive calls; and

software ~~an account management application~~ residing in the mobile phone and configured to store and manage a plurality of internally stored accounts, each account having an internal balance;

~~to an accounting application residing in the mobile phone and configured to~~ calculate charges for a call made or received by the mobile phone and to allow transfer of amounts amongst said internal accounts;

wherein said software ~~the account management application and the accounting application cooperate to~~ selectively charges one of the plurality of internally stored accounts for said call using said calculated charge;

wherein calls made or received via the first line are charged to one of the plurality of accounts and calls made or received via the second line are charged to another one of the plurality of accounts.

26. (previously presented) The mobile phone of claim 25 further comprising:

a user interface to allow a user to selectively determine how each call made or received by the mobile phone is to be charged to one of the plurality of accounts.

27. (canceled)

28. (currently amended) The mobile phone of claim 25 wherein said software ~~the account management application and accounting application~~ resides on a smart card attachable to the mobile phone.

29. (currently amended) The mobile phone of claim 25 wherein said software ~~the account management application and accounting application~~ resides on an internal memory in the mobile phone.

30 - 31. (canceled)

32. (original) The mobile phone of claim 25 wherein the plurality of accounts includes a postpaid account and a prepaid account.

33. (original) The mobile phone of claim 25 wherein the calls made or received via the first line include business calls and the calls made or received via the second line include personal calls.

34. (canceled)

35. (currently amended) A method for tracking account activities relating to use of a wireless device, comprising:

using software to internally store a plurality of accounts, each with an account balance, on a wireless device, wherein said software allows a transfer of amounts amongst said accounts;

selecting one of said a plurality of accounts to be charged for a communication; ~~wherein the plurality of accounts are internally stored in the wireless device and each account has an internal account balance;~~

causing the wireless device to be used for said communication;

calculating charges to be charged against said ~~the~~ selected account for said communication using software ~~a processor~~ in the wireless device; and

adjusting the selected internally stored account using the calculated charges.

36. (original) The method according to claim 35 wherein the step of selecting one of the plurality of accounts further comprises:

allowing a user to select one of the plurality of accounts via a user interface.

37 - 39. (canceled)

40. (original) The method according to claim 35 wherein the wireless device is a mobile phone.

41. (currently amended) The method according to claim 35 wherein said communication is ~~wireless device is capable of making or receiving~~ a data communication.

42. (currently amended) The method according to claim 35 wherein the step of selecting one of a the plurality of accounts to be charged further comprises:

identifying the origin or destination of the communication;

selecting the one of the plurality of internally stored accounts to be charged based on the identified origin or destination of the communication.

43. (previously presented) The method according to claim 35 wherein one of said internal accounts has a usage limit and use of said wireless device is restricted when the usage limit is exceeded.

44. (previously presented) The method according to claim 35 wherein one of said internal accounts has a prepaid amount and use of said wireless device is restricted when the prepaid amount is exhausted.

45. (currently amended) A method for tracking account activities made by a mobile phone having a first line and a second line both configured to make and receive calls, comprising:

assigning a first internally stored account with an internal account balance to calls made or received via the first line;

assigning a second internally stored account with an internal account balance to calls made or received via the second line;

making or receiving a call via either the first line or the second line;

calculating charges to be paid for the call using a processor in the mobile phone;
and

adjusting either the first account or the second account based on the calculated charges depending on which one of the first and second lines the call is made or received
wherein said wireless device is capable of transferring account balances between said first and second accounts.
